## How do we calculate the cost of gas or electricity used?

We multiply each kWh you use by your unit rate.

## How to work out your daily standing charge?

Divide the total standing charge displayed in your bill by the number of days in the period of your bill.

---

## How do you calculate a kWh (kilowatt hour) on my gas bill?

Your gas meter measures the gas you've used in cubic metres or 100s of cubic feet. We convert this to kWh when we calculate your bill. To convert a cubic feet measurement into cubic metres, we multiply it by 2.83. We multiply the cubic metre figure by the correction factor and then by the Calorific Value (CV). Finally we divide the result by 3.6 to reach your kWh figure. This is a standard calculation that all gas suppliers must follow. Find out more about your calorific value at [uw.link/calorific](http://uw.link/calorific).

- Metric meter:  $\text{kWh} = ((\text{Read2} - \text{Read1}) * 1.02264 * \text{CV}) / 3.6$
- Imperial meter:  $\text{kWh} = ((\text{Read2} - \text{Read1}) * 2.83 * 1.02264 * \text{CV}) / 3.6$

These figures are for example only, use the formula and your units used to calculate your bill.
